

## HOW TO CALCULATE YOUR GPA for ONE SEMESTER

To predict what your GPA will be for this term, substitute different grades/values for your classes to see what the effect might be on your final GPA. What happens if I get a C? or a D? An A?

1. Multiply the point value of the letter grade (see scale below) by the number of credit hours. The result is the grade points (quality points) earned.
2. Total the credit hours for the term; total the quality points for the term.
3. Divide the total quality points by the total credit hours.

### Grades and their point values:

A	=	4.0	C+	=	2.3
A-	=	3.7	C	=	2.0
B+	=	3.3	C-	=	1.7
B	=	3.0	D+	=	1.3
B-	=	2.7	D	=	1.0

### Example:

	Grade	Point Value	X	Graded Credits	=	Quality points
Biology (4 crs.)	B	3.0	X	4	=	12.0
History (3 crs.)	A-	3.7	X	3	=	11.1
Calculus (3 crs.)	C	2.0	X	3	=	6.0
Art (3 crs.)	A	4.0	X	3	=	12.0
Literature (3 crs.)	B+	3.3	X	<u>3</u>	=	<u>9.9</u>
				16 crs.		51.0
					÷ 16 =	<b>3.19 GPA (just over a B avg.)</b>

Your Courses:	Grade	Point Value	X	Graded Credits	=	Quality points
_____	_____	_____	X	_____	=	_____
_____	_____	_____	X	_____	=	_____
_____	_____	_____	X	_____	=	_____
_____	_____	_____	X	_____	=	_____
_____	_____	_____	X	_____	=	_____
_____	_____	_____	X	_____	=	_____
			<b>Total Crs.</b>	_____	<b>Total</b>	_____ ÷ _____ = _____ GPA (tot. crs.)
